 APPLICATION SITES AND DIRECTIONS**

For crack and crevice applications. Place tip of applicator into area you want to treat and squeeze 4 to 6 short, quick puffs for every lineal foot of area to be treated.

1. Apply under and behind appliances in kitchens, bathrooms and utility rooms (remove kick plates if possible).
2. Remove kitchen and bathroom drawers and apply a light dust of this product into drawer wells.
3. Kitchen and bathroom cabinets and vanities often have a space between the floor and the bottom drawer. This is an ideal living area for cockroaches and ants. If a gap exists along the top or bottom of the kick plate, dust this product into the void area. If no gaps are present, drill a 1/4" hole every two feet along the kick plate, making sure to drill at least one hole under each cabinet, and apply this product through the holes. It is not necessary to seal the holes after application.
4. Apply in voids around plumbing pipes behind water heaters and under-sinks in kitchens, bathrooms and utility rooms. Plates around pipes should be pulled back to allow access to the void.
5. Remove electrical wall socket and switch covers and dust this product into boxes and voids. If necessary, drill small holes just above the baseboard to gain access into wall voids.
6. If there are cracks or spaces between the wall and doorframes, cabinets, molding or baseboards, they provide excellent hiding places for roaches and ants. Dust a small amount of this product into these areas wherever possible.
7. Apply in attics around the perimeter eaves and around all vent pipes and access areas. Pay particular attention to areas above kitchens and bathrooms.
8. Apply around the perimeter of dropped ceilings.
