

InVite™

multi-insect lure

Contains Multiple Pheromone and Food Attractants for Stored Product Pests

Beetles: Cigarette, Warehouse, Khapra, Flour,
Saw-Toothed Grain, Drugstore and Others

Moths: Indian Meal, Almond, Tobacco,
Mediterranean Flour, Cacao, Raisin and Other
Ephestia Moths

Excessive Heat May Damage Product

Net Contents: One Syringe
Containing Six 3 cc doses
(0.6 fl oz)

Directions for Use

InVite Multi-Insect Lure may be used with any glueboard.

Place the cotton on the glueboard and apply the Multi-Insect Lure to the cotton.

For moth applications, 1/3 dose is sufficient per placement.

For Beetle or mixed applications, 2/3 to 1 full dose will likely be needed per placement.

Place traps in areas where grain products are stored, particularly in areas that provide both food and harborage for pests. The InVite Multi-Insect Lure will remain active for 60-90 days (longer in cool areas). Place traps about every 30 feet, or closer in areas with lots of readily available food, for beetle applications. For moths and flying beetles, i.e. Cigarette beetles, a 50 foot spacing should be adequate. Do not place traps within about 30 feet of outside doors, as moths could be drawn in from outside.

To Use with the D-Sect Station

1. Open the D-Sect Station (see directions in the D-Sect Station carton). Remove the release paper from a D-Sect

Storage and Disposal

Store product at or below room temperature and out of reach of children. For longer-term storage of more than one month, refrigeration is recommended. Dispose of product and packaging by wrapping in newspaper and throwing in the trash.

Precautions

Although the product contains no pesticides and is not known to be toxic, place out of the reach of children. It is recommended to wear gloves when handling to avoid getting product odor on skin. If product contacts skin, wash with soap and water.

Custom Glueboard and place it in the Station.

2. Place cotton (included with the InVite Multi-Insect Lure) on the center of the glueboard. Carefully squeeze the desired dose of the Multi-Insect Lure onto the center of the cotton.

3. Place the D-Sect in any orientation (it's not necessary to keep it horizontal) and secure the D-Sect if needed using Hercules Putty, Liquid Nails, double-sided tape, screws, nails, Velcro, Dual-Lock, wire or construction adhesive. The Station can also be suspended under shelving by using Hercules Putty, Dual-Lock or Velcro placed on top of the Station. The cover of the Station can be removed for servicing even when the base is secured down.

To use with the Hanging PFT Station for Moths and Cigarette Beetles

Refer to the hanging PFT Instructions. Fill the Cup about 1/2 full with water and add 1/3 to 2/3 dose of InVite Multi-Insect Lure on top of the water. Hang traps neat walls and in a grid pattern with a spacing of 50'-100' in warehouses. Placement a little above eye level is best. Ail movement is helpful and temperature above 60 °F.
